ACCESSORIES FOR MANIFOLDS

ITAP AT A GLANCE

> THE COMPANY

ITAP SpA, founded in Lumezzane (Brescia) in 1972, is currently one of the leading production companies in Italy of valves, fittings and distribution manifolds for plumbing and heating systems.

Thanks to fully automated production processes, with 85 transfer machines and 55 assembly lines, we are able to produce 400,000 pieces per day.

Our innate pursuit for innovation and observance of technical regulations is supported by the company certification ISO 9001. The company has always considered its focus on quality as the main tool to obtain significant business results: today ITAP SpA is proud to offer products bearing the approval of numerous international certifying bodies.

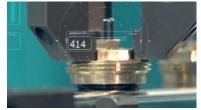

PG

915CK Extension kit for manifolds

SIZE	PRESSURE	CODE	PACKING
1"X3/4"X1"	6bar/87psi	9150010001034C K	1/12

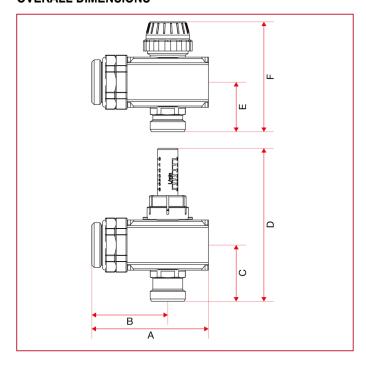

TECHNICAL SPECIFICATIONS

Consisting of:

- 1 flow manifold in nickel-plated brass with flow meter
- 1 return manifold in nickel-plated brass with shut-off valve preset for electrothermal actuator
- 2 adjustable male/male fittings with o-ring

Maximum working temperature: 70°C Maximum working pressure: 6 bar.

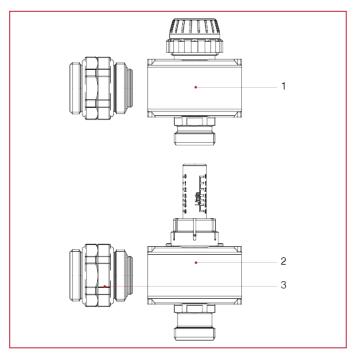

Threads: ISO228 (equivalent to DIN EN ISO 228 and BS EN ISO 228).

CERTIFICATIONS

TECHNICAL SPECIFICATIONS

Consisting of:

- 2 adjustable end pieces
- off-centre by-pass pipe
- adjustable drain valve
- air vent valve

Fixed setting: 0,25 bar.

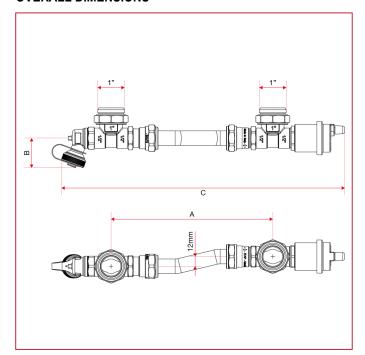

Maximum working temperature: 80°C.

Threads: ISO228 (equivalent to DIN EN ISO 228 and BS EN ISO 228).

To be installed in metal boxes art. 498 - 498R with manifolds made out of brass bar or stainless steel.

DIFFERENTIAL BYPASS INSTRUCTIONS

- 1. Use

The bypass kit consists in a differential valve with fixed settings, and is used to allow constant maintenance of the differential pressure value in the event of progressive closing of the circuits. The variation in capacity and therefore the formation of excess pressure can be caused by the presence of automatic interception devices such as, for instance, the electro-thermal controls art. 891M or the thermostatic control art. 891 for heating units. The 860BY kit can be mounted in metal boxes with manifolds.

- 2. Technical features

Consisting of:

- 2 adjustable end pieces
- off-centre by-pass pipe
- adjustable drain valve
- air vent valve

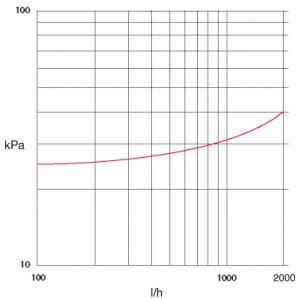

Fixed setting: 0,25 bar.

Maximum working temperature: 80°C.

Threads: ISO228 (equivalent to DIN EN ISO 228 and BS EN ISO 228).

- 3. Pressure drops

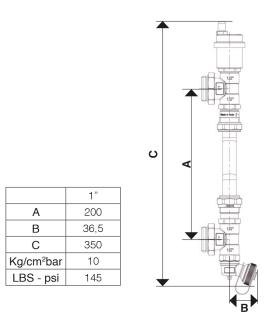

By-pass differential pressure 25KPa (0,25 bar).

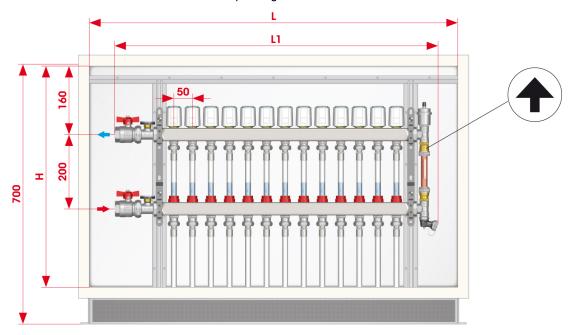

- 4. Overall dimension

- 5. Instructions for the assembly of the BY-PASS on manifolds in boxes. Install the differential BY-PASS kit so that the arrow is pointing towards the return manifold.

- 6. Warning

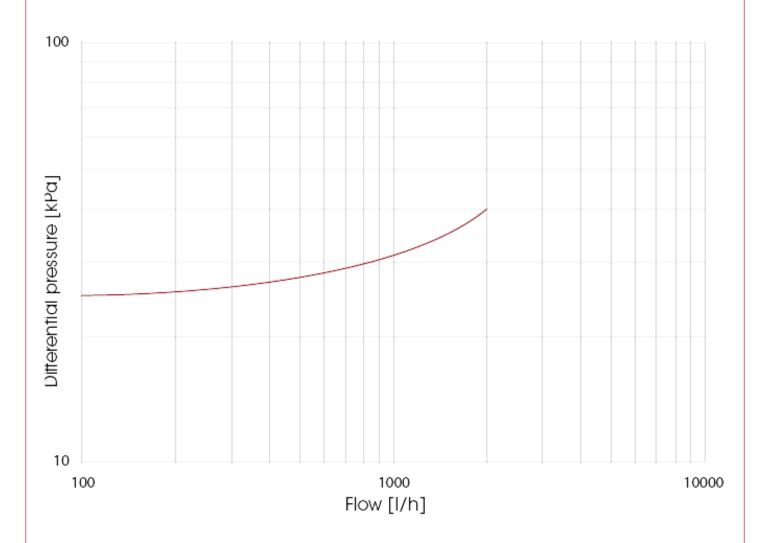

It is important to comply with all the assembly instructions so as not to jeopardize the correct functioning of the by-pass kit and also:

- To make sure that the kit is installed with the arrow directing from the flow manifold towards that of return. On the contrary, this will cause malfunction of the plant.
- Do not mechanically force the threads. As time goes by the extra stress can cause breaks and hydraulic leaks.
- Make sure that all the connections are hydraulically sealed.
- Attention! High temperatures of the thermo-vector fluid can cause serious damage to people and things. Adopt all necessary preventive actions!

230-2fili	891M2302NC	1/50
230-4fili	891M2304NC	1/26

CERTIFICATIONS

TECHNICAL SPECIFICATIONS

Suitable for pre-assembled manifols. Normally closed, on-off operation. Power supply voltage: 230V. Power consumption: 1W.

Minimum and maximum working ambient temperatures: 0°C, 60°C.

Maximum differential pressure: 1,5 bar.

Class of protection: IP54.

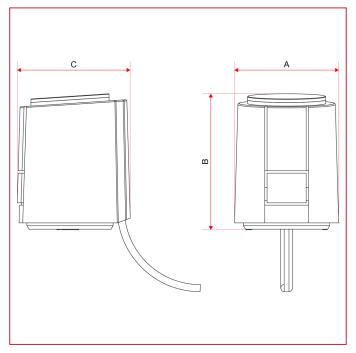

Available with 2 cables or 4 cables with an auxiliary microswitch.

Capacity of the auxiliary connection: 300mA.

CE marked.

А	44	44	
В	57	57	
С	48	48	

INSTRUCTIONS

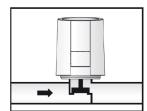

FUNCTION:

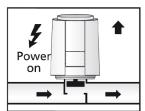

The actuator mechanism of the actuator uses a PTC resistor-heated wax element and a compression spring. The wax element is heated by applying the operating voltage and moves the integrated ram. The force generated by the movement is transferred on the valve lifter and thus opens and closes the valve.

FUNCTION DISPLAY:

The function display of the actuator (all-around display) allows identifying the operating condition (valve open or closed) at a glance.

In case of the NC version, an extended function display shows opening of the valve.

FIRST-OPEN FUNCTION:

In its delivery condition, the actuator is kept open when de-energised due to the First-Open function. This enables heating operation during the carcass construction phase even when the electric wiring is not yet complete.

During the later electrical start-up, the First-Open function is unlocked by applying the operating voltage for more than 6 minutes. The actuator will then be completely operable.

TECHNICAL INFORMATIONS:

Operating voltage: 230 V AC, +10%...–10%, 50/60 Hz Max. inrush current: < 550 mA during 100 ms max.

Operating power: 1 W (measured with precision reference instrument LMG95)

Stroke (actuator travel): 4.0 mm Actuating force: 100 N ±5%

Fluid temperature: 0 to +100°C (in dependence of the adapter even higher)

Ambient temperature: 0 to +60°C

Type of protection IP 54 / II (in all installation positions)

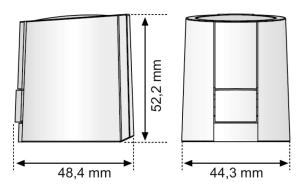

CE conformity according to: EN 60730

Housing material/housing colour: Polyamide / light grey (RAL 7035)

Cable length: 1 m

Surge protection according to EN 60730-1: min. 2.5 kV

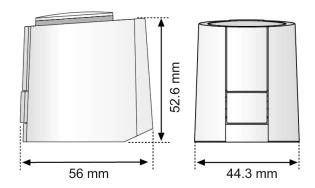

DIMENSIONS 2-WIRE ACTUATOR

DIMENSIONS 4-WIRE ACTUATOR (with micro-switch)

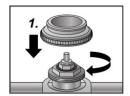

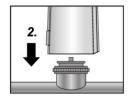

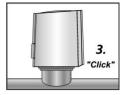

INSTALLATION WITH VALVE ADAPTER

Simply snap-on the actuator to the manually pre-installed valve adapter.

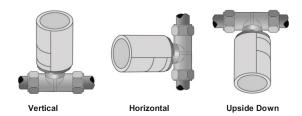

- First the valve adapter is screwed on the valve manually (Thread: M30x1,5)
- The acutator is placed vertically on the valve adapter.
- The actuator snaps onto the valve adapter with a "click" when pressed down vertically by hand.

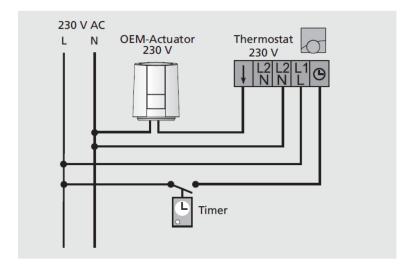

MOUNTING POSITIONS

Preferred installation position of the acutator is vertical or horizontal. An upside down position may reduce product life through special circumstances (e.g. contaminated water, condensate ...).

ELECTRICAL INSTALLATION

2-wire actuator

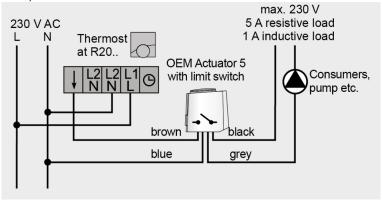

We recommend usage of the following lines for installing a 230 V system: Light plastic-sheathed cable NYM 1.5 mm² Flat webbed building wire NYIF 1.5 mm²

ELECTRICAL INSTALLATION

4-wire actuator (with micro-switch)

We recommend usage of the following lines for installing a 230 V system: Light plastic-sheathed cable NYM 1.5 mm² Flat webbed building wire NYIF 1.5 mm²

891MR Electrothermal actuator

SIZE	CODE	PACKING
230-2fili	891M2302NCR	1/56

TECHNICAL SPECIFICATIONS

Suitable for pre-assembled manifols. Normally closed, on-off operation. Power supply voltage: 230V. Power consumption: 1,2W.

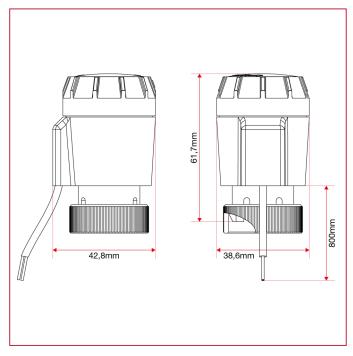

Minimum and maximum working ambient temperatures: 0°C, 60°C.

Maximum differential pressure: 1,5 bar.

Class of protection: IP54. Available with 2 cables only.

CE marked.

OVERALL DIMENSIONS

230-2fili

INSTRUCTIONS

FUNCTION:

The actuator mechanism of the actuator uses a PTC resistor-heated wax element and a compression spring.

The wax element is heated by applying the operating voltage and moves the integrated ram.

The force generated by the movement is transferred on the valve lifter and thus opens and closes the valve.

INSTALLATION:

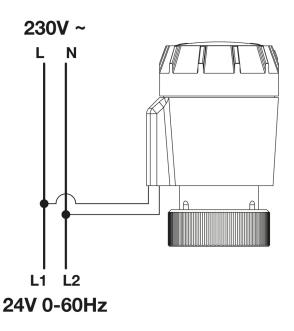

Simply follow these specifications:

- 1. Remove the plastic handle or cap from our distribution manifold.
- 2. Turn white plastic cap anti-clockwise and put the actuator on "Man. position".
- 3. Screw actuator's nickel-plated ring on valve's thread (M30x1,5 mm).
- 4. Turn white plastic cap clockwise and put the actuator on "Auto. position".

INSTALLATION POSITION:

ELECTRICAL WIRE CONNECTION:

471FL Flow meter

SIZE	CODE	PACKING
1/2"	471FL012	1/200

CERTIFICATIONS

TECHNICAL SPECIFICATIONS

Flow meter to measure the flow of water in a circuit

- including a device to adjust the flow.
- to be installed with flow manifold.

Body in nickel-plated brass.

Scale: 0-5 I/min.

Accurancy of reading: +/- 10%.

Maximum working temperature: 70°C.

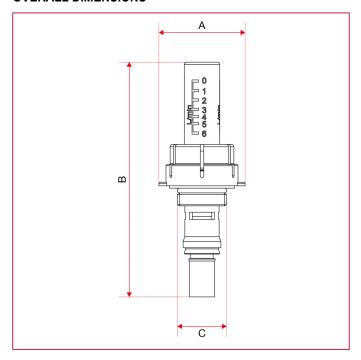

Threads: ISO228 (equivalent to DIN EN ISO 228 and BS EN ISO 228).

INSTRUCTIONS

Direct regulation, indication and isolation of flows from heating and cooling circuits in manifold flow pipe bars.

The flow meter of fers an easy and accurate method of adjusting the flow rates in heating and cooling circuits.

Thanks to intensive development work and new technologies, the flow meter can be integrated efficiently in the flow pipe bar to ensure reliable indicator values.

Correct balancing of hydraulic circuits ensures optimum energy distribution, resulting in more efficient and economical operation in accordance with the energy saving regulations provided for by legislation.

With the flow meter, any qualified fitter can set the appropriate flow rate on the premises in question, thus avoiding investments in training and expensive measuring devices.

INSTALLATION:

The flow meter is installed in the flow pipe bar of the manifold in a horizontal or vertical position.

- 1 Indicator unit
- 2 Sight glass with scale
- 3 Cover cap
- 4 Sliding bar
- 5 Flow pipe manifold
- 6 Measuring cylinder
- 7 Male adapter

ADVANTAGES:

- Precise and quick balancing without diagrams, tables or measuring devices
- Flow rate displayed directly in I/min
- Regulating valve with isolating facility
- Sight glass available as a replacement part
- Removable sight glass (ease of maintenance)
- Can be installed in any position

TECHNICAL DATA:

Range: 0 - 6 l/m

Operating temperatures: Brass flow meter: -10 °C - +70 °C

Maximum working pressure: 6 bar

System test pressure max.: 10 bar (20 °C)

Seals: EPDM

Male thread to ISO 228

Measuring accuracy: ±10% of the highest nominal value (the change in viscosity must be taken into account with antifreeze additives)

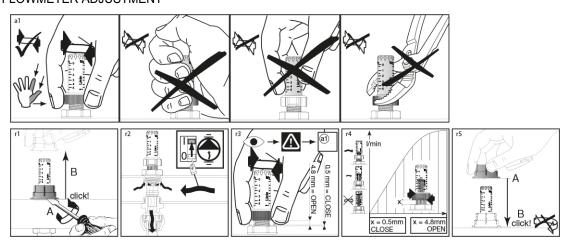

FLUIDS:

- Heating water (VDI 2035)
- Cold water
- Water and proprietary additives used against corrosion and freezing

ASSEMBLY:

When assembling the flow meter in the manifold, the starting torque must not exceed 20 Nm (1/2").

FLOWMETER ADJUSTMENT

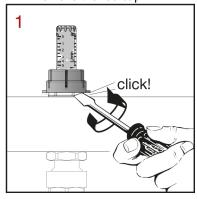

MAINTENANCE:

The sight glass can be removed if necessary for maintenance purposes and replaced. The relevant underfloor heating circuit must be separated in this case from the rest of the system.

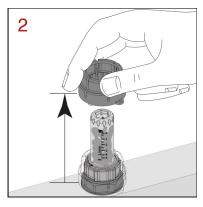

HOW TO REPLACE THE SIGHT GLASS:

1 - 2 Remove the red cap.

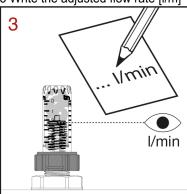

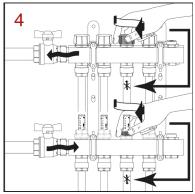

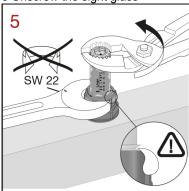

3 Write the adjusted flow rate [l/m]

4 Shut-off the flow meter and the convertible valve

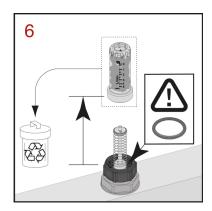

5 Unscrew the sight glass

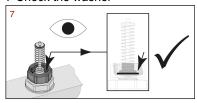

6 Remove the sight glass

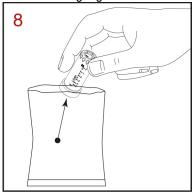

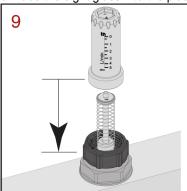

7 Check the washer

8 Clean the sight glass or take a new one

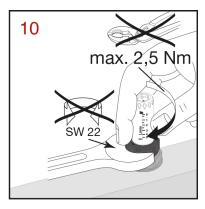

9 Place the sight glass into the plastic spindle

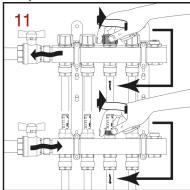

10 Screw the sight glass

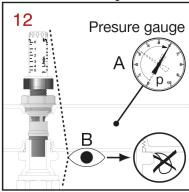

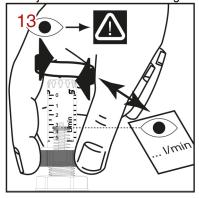

11 Open the flow meter and the convertible valve

12 Check the water tightness of the flow meter before turning on the heating or cooling system

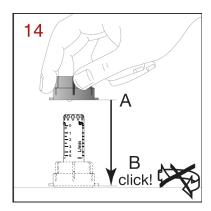

13 Adjust the flow rate according to the figure as per nr. 3

14 Place the cover cap on the plastic spindle

OPERATION:

The flow measurement is based on the displacement principle of a baffle disc, which is inserted in a measuring tube. The position is conveyed to the sight glass on the indicator unit by means of a sliding bar, which fixes the baffle disc to the indicator unit. The scale printed on the sight glass allows the flow rate to be read with ease.

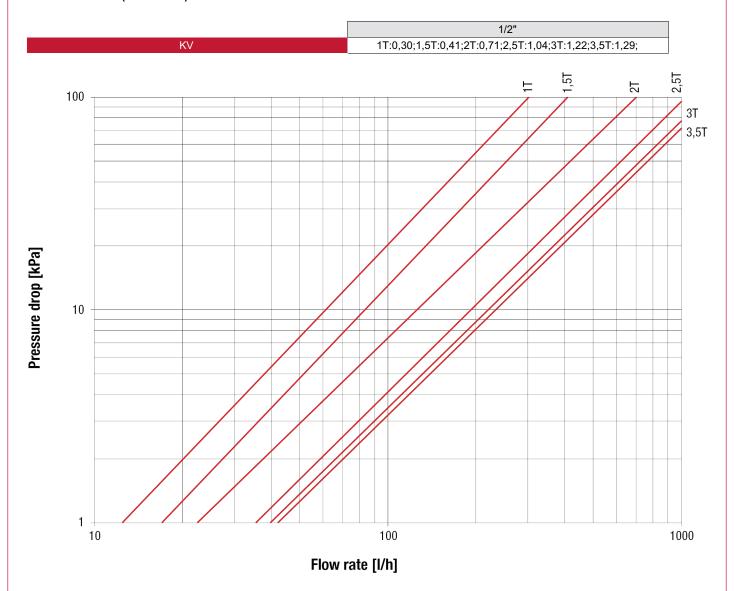

Turning the black spindle changes the opening profile of the valve and allows the desired flow rate to be set.

The flow is isolated by turning the spindle fully.

CERTIFICATIONS

TECHNICAL SPECIFICATIONS

Kit consisting of: 2 ball valves, red and blue T handles.

Available size: 1".

Male/female threads.

T handle in aluminium.

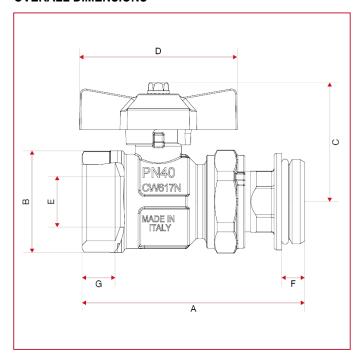

Body in nickel-plated brass.

Minimum and maximum working temperatures: -20°C, 150°C in absence of steam.

Thermometer: scale 0° C, 80° C – diameter mm. 40

Threads: ISO 228 (equivalent to DIN EN ISO 228 and BS EN ISO 228).
